# Mini-project #2

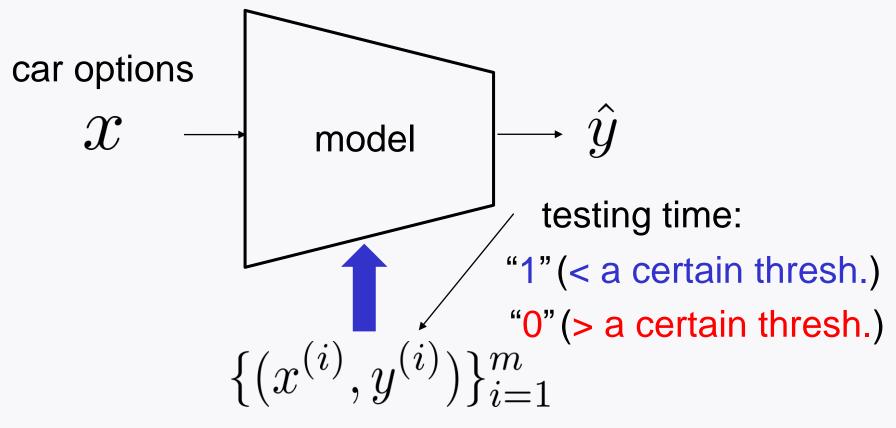

#### **Practice Session 20**

Changho Suh

January 30, 2024

## Recap: Mini-project #1

## **Test-time prediction**

Mercedes-Benz dataset

## **Recap: Data organization**

#### Data load:

```
import pandas as pd
data=pd.read_csv("mercedes_test.csv")
```

## Pre-processing:

```
# choose categorical data columns

cf = data.select_dtypes(include=['object']).columns

data[cf] = data[cf].astype('category')

data = pd.get_dummies(data)  # one hot encoding

X_df, y_df = data.drop(['ID', 'y'], axis=1), data['y']

y df = (y df<numpy.median(y df)).astype(float)</pre>
```

## **Recap: Data organization**

## Transformation to numpy data:

```
X,y = X_df.values, y_df.values
```

#### Train/test split:

```
from sklearn.model_selection import train_test_split
X_train, X_test, y_train, y_test =\
train test split(X,y,test size=0.1, stratify=y)
```

## Recap: LS hyperparameter search

```
from sklearn.model selection import RandomizedSearchCV <---
alpha list = [0.001, 0.01, 0.1, 1, 10]
model = RidgeClassifier()
cv = RandomizedSearchCV (model, grid, n iter=5, cv=5) <---
cv.fit(X train, y_train) ←
cv.cv results #logs ←
cv.best params # best alpha ←
best model = cv.best estimator ←
dump(best model,'best model.joblib')
```

# Recap: LR hyperparameter search

```
from joblib import dump <---
from sklearn.model selection import RandomizedSearchCV <---
alpha list = [0.001, 0.01, 0.1, 1, 10]
model = LogisticRegression(solver='liblinear, max iter=10000)
grid = { 'alpha':alpha list) -
cv = RandomizedSearchCV(model, grid, n iter=5, cv=5)
cv.fit(X train, y train) ←
cv.cv results #logs ←
cv.best_params  # best alpha ←
best model = cv.best estimator ←
dump(best model,'best model.joblib')
```

## Recap: Regularization & He's initialization

```
from tensorflow.keras.models import Sequential
from tensorflow.keras.layers import Dense
from tensorflow.keras.regularizers import 12
model NN = Sequential()
model NN.add(Dense(128, activation='relu',
                   kernel regularizer=12(0.01),
                   bias regularizer=12(0.01),
                   kernel initializer='he normal'))
model NN.add(Dense(1, activation='sigmoid',
                   kernel regularizer=12(0.01),
                   bias regularizer=12(0.01))
model NN.compile(optimizer='adam',
                 loss='binary crossentropy',
                 metrics=['acc'])
```

# Recap: Early stopping & learning rate decay

```
from tensorflow.keras.callbacks import EarlyStopping
from tensorflow.keras.callbacks import LearningRateScheduler
es callback = EarlyStopping (monitor='val acc', patience=20)
# define scheduling rule
def scheduler(epoch, lr):
    if epoch in [10,20,30]: lr=lr*0.1
    return lr
lrs callback = LearningRateScheduler(scheduler)
# training w/ callbacks
model NN.fit(X train, y train,
          validation split=1/9, epochs=100,
          callbacks=[es callback,lrs callback])
```

## Recap: DNN hyperparameter search

```
from sklearn.model selection import RandomizedSearchCV
from tensorflow.keras.wrappers.scikit learn import KerasClassifier
def build model(lambda):
  model = Sequential()
  model.add(Dense(128, activation='relu',
            kernel regulerizer=12(lambda ),bias regulerizer=12(lambda ))
  model.add(Dense(1, activation='sigmoid'))
  model.compile(optimizer='adam', loss='binary crossentropy',
  metrics=['acc'])
  return model
model = KerasClassifier(build model)
grid = dict(lambda = [1e-3, 1e-2, 1e-1, 1, 10])
cv = RandomizedSearchCV(model, grid, n iter=5, cv=5)
```

## Recap: Logging and saving

cv.fit(X train, y train, epochs=10)

df.to csv('logs DNN.csv')

```
cv.cv_results_ #logs
cv.best_params_ # best alpha
best_model_DNN = cv.best_estimator_
import pandas as pd
df = pd.DataFrame.from dict(cv.cv results , orient='columns')
```

logging

```
best_model_DNN.model.save('best_model_DNN')
```

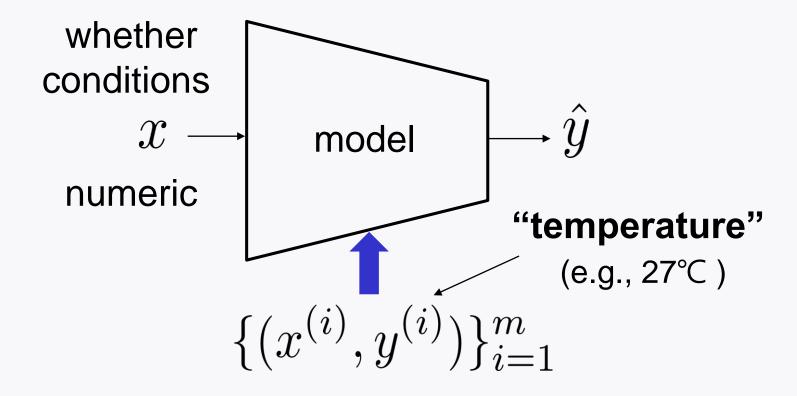

saving the model

## **Today's contents**

## Mini-project #2:

Weather prediction using Jena climate dataset

## **Task: Weather prediction**

#### Jena climate dataset

#### Data:

weather features collected from 2009 to 2016  $\in \mathbf{R}^{14}$ 

Example: pressure, humidity, ...

**Label:** celsius temperature  $\in \mathbf{R}$ 

Measured in Jena, Germany, every 10 minutes:

420,551 samples

#### Download Jena climate dataset

The dataset is prepared by Max Planck Institute for Biogeochemistry.

Download 'jena\_climate\_2009\_2016.csv' from:

https://www.kaggle.com/datasets/mnassrib/jena-climate

#### Load Jena climate dataset

import pandas as pd

memory usage: 48.1+ MB

```
data = pd.read_csv('jena_climate_2009_2016.csv')
data.info()
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 420551 entries, 0 to 420550
Data columns (total 15 columns):
                                             pressure

# missing entries

## Missing entries in wind speed

```
import matplotlib.pyplot as plt

plt.figure(figsize=(10,3), dpi=150)
wv = data['wv (m/s)']
plt.plot(date_time, wv)
plt.title('Wind speed (m/s)')
plt.show()
```

## **Preprocessing**

## Fill up the missing entries with the mean:

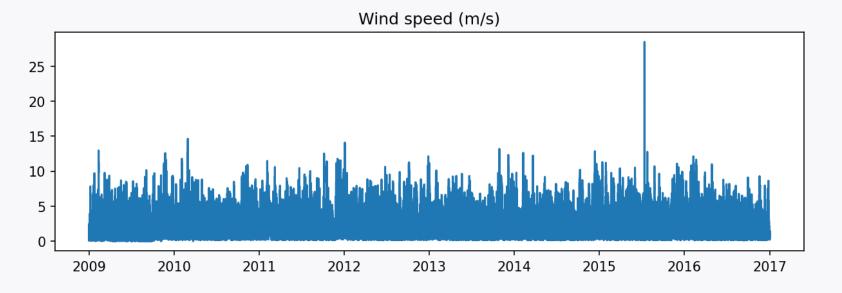

```
wv = data['wv (m/s)']
wv_missing_idx = (wv == -9999.00) returns corresponding indices
wv_mean = wv[~wv_missing_idx].mean()
wv[wv_missing_idx] = wv_mean

max_wv = data['max. wv (m/s)']
missing_idx = (max_wv == -9999.00)
max_wv_mean = max_wv[~missing_idx].mean()
max_wv[missing_idx] = max_wv_mean
```

## The processed wind speed

```
import matplotlib.pyplot as plt

plt.figure(figsize=(10,3), dpi=150)
plt.plot(date_time, wv)
plt.title('Wind speed (m/s)')
plt.show()
```

# Check if missing entries are filled up
